### HABITAT SURVEY FOR SPIRANTHES DILUVIALIS - JEE-0168-92

On March 2, 1992, a walk-through was performed to evaluate the potential for occurrence of the Diluvial Ladies' Tresses (Spiranthes diluvialis) on the OU1 French Drain, South Interceptor Ditch, and OU4 pipeline and treatment tank location sites. A noted expert on the habitat and occurrence of this federally listed threatened plant species conducted the walk-through and his findings state that:

- OU4 has no possibility for the occurrence of Spiranthes diluvialis.
- The French Drain site has already been disturbed; however, the disturbed area included none of the habitat in which the plant is known to occur.
- The environs of the SID include certain small areas in which the necessary perennial moisture, along with moderate competition from competing vegetation, leaves open the possibility, small though it may be, that Spiranthes diluvialis could occur.

A copy of the report is attached for DOE utilization. If you have any questions regarding this survey, please contact Steve Nesta on 273-6076, or Richard Flory on 273-6188.
